Component Based Approach

Components

Functional component (Stateless)

```
const Welcome = ({ name }) => <div>Hi! {name}</div>
```

Class component (Stateful)

```
import React from 'react';

class Welcome extends React.Component {

    render() {

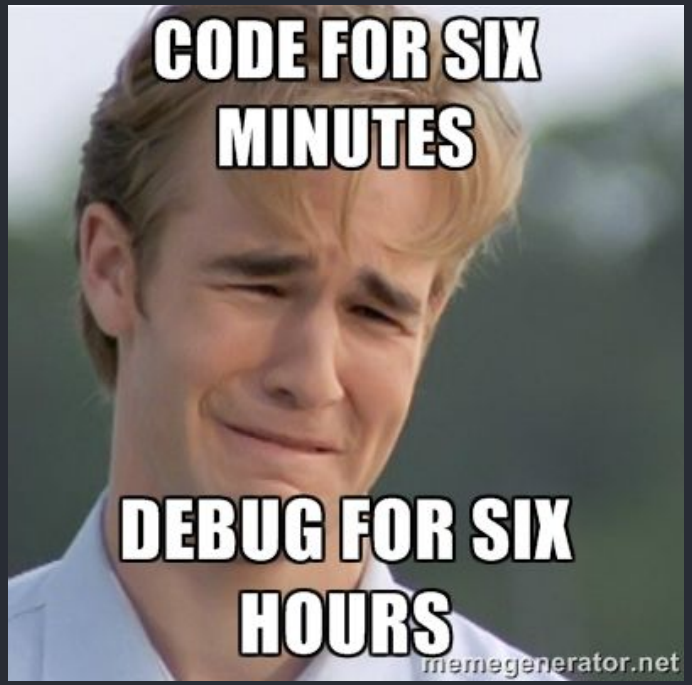
      const { name } = this.props;

      return <div>Hi! {name}</div>;

    }

}
```

ReUSE



```
const element = (
  <div>
    <Welcome name="Jon" />
    <Welcome name="Ned" />
    <Welcome name="Arya" />
  <div>
);
ReactDOM.render(
  element,
  document.getElementById('root')
);
```
